The **Essential Skills for Natural Gas: Scheduling 101 Technical Training Class** is designed to give each participant a broad overview of the scheduling process for various commodities, with the particular focus being natural gas. Scheduling is the act of prioritizing valid nominations based on defined priority schemes when available capacity is not sufficient to meet all of the nominations requests. The morning session of the class will concentrate on the basics of scheduling including the function, trading shop set-up, information flow and terminology as well as an in-depth study of the role of the scheduler and daily activities. The afternoon session will cover maps and regions, types of deals, nomination cycles, allocations, make-up and imbalances and the trading impact on scheduling. Participants will receive a comprehensive education on the scheduling process from start to finish, as well as the development of hints and habits to excel as a great scheduler.
